

Evacuation procedure for a drill with an earthquake hypothesis

First

The alarm will be activated

After

Start withdrawal phase, go to an area marked as "lower risk zone". Campus alarm will be activated. Follow the instructions of the personnel.

Get out of your location without running, yelling, or pushing. Use the emergency exits.

Do not use elevators. Go down the stairs.

Go to the nearest meeting point.

Self-protection position

Place yourself in a self-protective posture in a marked area of lower risk or under a table.

At the meeting point

Wait for the instructions of the personnel, who are identified with a vest.

If you require any type of support, request it from the personnel team.

An inspection exercise of the buildings will be carried out by Civil Protection personnel and at the end you will receive instructions.

Previously identify signage in buildings
